

OCR Solution Integrated in the Mail INKdraw Software *Read & Print - Matching - Position control*

HAS Mail ApS offers, as an integrated part of ourMail INKdraw software, an OCR system. HSA OCR is a cost-effective, user-friendly, and completely integrated OCR system capable of reading and handling printed and coded information controlling the prints, and performing print quality control.

Print Quality Control

The HSA OCR system is capable of matching documents and performing advanced print quality control by reading and comparing the printed text or barcode with the message created.

The matching of a document is accomplished by reading a printed code (OCR, BCR addresses etc.) This ensures correct print results and consequently helps you increase productivity and reduce wasted time and resources. HSA OCR equals print control and an assurance of the quality of the final result.

100 % Integrated

The OCR is 100% integrated in the HSA Mail system which gives you a great amount of security in handling the data, since one central controller handles all data. As a consequence, all communication to external units is unnecessary. When preparing print jobs, all setups can be placed in the job profile which makes the job easy and uncomplicated for the operator

Multiple Cameras

The HSA OCR supports multiple CCD cameras simultaneously. The cameras are connected via the Firewire Port and can be triggered individually.

In addition, the system includes matching verification between cameras and between addresses and management of databases. HSA OCR works real time.
